

Medication Manager

4. Scope

In Scope

- User account creation, login, and logout, and storage of medication info associated with each account
- Ability for users to add, edit, and remove medications.
- Ability to enter medication information, including medication name, dosage amount, and scheduled time.
- Medication reminders and notifications when a scheduled dose is due.
- Ability for users to mark a medication dose as taken or missed.
- Daily medication dashboard displaying medications that are due, taken, missed, and upcoming.
- Medication history that allows users to view previously taken or missed doses.
- Secure storage of user accounts and medication information in a database.
- Each user's medication information will be associated with their individual account and restricted from other users.
- Simple and accessible user interface with clear navigation, large text, and minimal steps to complete common actions.

Out of Scope

- Medication prescribing or diagnosis
- Recommendations about medication dosage or changes in treatment
- Prescription refills or medication ordering
- Insurance, billing, or payment processing
- Social features or communication between users
- Advanced analytics or health reports based on medication history
